Professional Summary

Senior Software Developer with 9+ years of experience delivering robust, scalable, and maintainable web applications in fast-paced startup environments. Skilled in taking projects from concept to MVP, with strong backend engineering (Python, Django, FastAPI, Flask), cloud deployment (AWS, Docker), and modern frontend development (React, Angular). Passionate about clean code, performance optimization, and collaborative development.

Technical Skills

- **Languages:** Python, JavaScript, HTML, Bash, SQL, C#, Java, GraphQL
- **Frameworks:** Django, Flask, FastAPI, Tornado, React.js, Next.js, Angular, Pytest
- **Databases:** PostgreSQL, MySQL, MongoDB, SQL Server
- **DevOps & Cloud:** Docker, Azure, AWS (S3, EC2, SES, SNS), DigitalOcean, Jenkins, GitHub/GitLab CI, Kubernetes (basic)
- **Tools:** Git, Jira, Jenkins, FileZilla, VS Code, PyCharm
- **Web Services:** Nginx, Apache, Gunicorn, REST APIs
- **Others:** WordPress, CronJobs, Stripe Payments
- **Backend Infrastructure / Distributed Systems / Asynchronous Processing:** Celery, Redis, RabbitMQ
- **Leadership:** Leadership & Collaboration: Team Management, Mentorship, Agile/Scrum, Sprint Planning, Code Review
- **GenAI tools:** Github Copilot, Claude, ChatGPT.

Professional Experience

Tech Mahindra – Tech Lead | March, 2026 – May, 2026

About Product: Working with client, contributing to the development of intelligent insurance automation solutions. The project focuses on streamlining and automating insurance workflows through advanced document validation, data processing, and backend integrations. Involved in building scalable backend services, optimizing business processes, and ensuring accurate validation of insurance-related documents to improve operational efficiency and reduce manual intervention. Collaborating closely with cross-functional teams to deliver reliable and high-impact enterprise solutions.

- Leading team for few team members
- Working with client for end to end delivery for the project

- Utilized GenAI tools such as GitHub Copilot to enhance backend development efficiency, accelerate API implementation, streamline debugging and refactoring, and maintain high-quality, scalable code.
- Teck Stack: Python, FastAPI, Postgres, Azure

Benefitone Engagement Technologies Private Limited – (Rewardz Private Limited) – Senior Software Developer / Tech Lead | May, 2021 – Nov, 2025

About Product: This is a leading SaaS-based employee engagement and rewards platform that empowers organizations to enhance recognition, wellness, and performance through digital solutions. Its enable enterprises to drive employee motivation, peer recognition, incentive management, and holistic well-being programs across multiple geographies.

- Led backend architecture and system design for scalable modules in Skor / CerraPoints platform.
- Integrated third-party services like AWS SES, SNS, and handled email notifications.
- Built RESTful APIs and managed authentication flows using **Python, Django**.
- Maintained CI/CD pipelines using Jenkins, Docker, and AWS EC2 for smooth deployments.
- Designed and implemented **microservices** using **FastAPI** with **SQLAlchemy**
- Optimized PostgreSQL queries and mentored junior developers.
- Used MongoDB also for some services.
- Developed and maintained Angular-based frontends for dashboards and user workflows, reusable components, and seamless integration with backend APIs.
- Implemented background job processing using **Celery** with **Redis** as broker.
- Developed asynchronous tasks for sending emails, generating reports, and data imports.
- Improved API responsiveness by offloading heavy operations to Celery workers.
- Set up periodic task scheduling using Celery Beat for daily cleanup and data sync jobs.
- Designed and implemented asynchronous task queues using ****Celery**** and ****Redis**** to process high-volume background jobs.
- Built scheduled jobs with ****Celery Beat**** for nightly ETL and cleanup operations.
- Integrated ****FastAPI + Celery**** stack to improve system throughput and reduce API latency by 40%.
- Strong leadership abilities with experience managing small developer teams and coordinating cross-functional projects.

Neuroglia Health Private Limited – Software Engineer | Jan 2020 – Oct 2020

- Worked on DailyRounds / Marrow platform for NEET PG preparation.
- Developed REST APIs and React-based frontend for educational content management.
- Handled session and user management for a large user base.
- Worked with MongoDB mostly.
- Wrote unit tests and ensured code quality with Pytest.

Reckonsys Tech Labs Pvt Ltd – Software Engineer | May 2018 – Nov 2019

- GoldenSherpa: Event scheduling and video call features for residential healthcare placement (Django, Angular, AWS).
- VignaWorld: Developed hiring workflows for healthcare staff and admin dashboards (Django, React, AWS).
- WyngCommerce: Implemented First Allocation Quantity module for AI-based retail planning (Django, React).
- VNDLY: Built vendor management workflows including job posting and interview handling (Django, React, Jinja).

Freelancer | June 2016 – Oct 2017

- QuickMetrix: Developed a social media monitoring tool that scrapes and analyzes posts across platforms. Built auto-response engine and reporting dashboards (Python, Tornado, MongoDB).
- SaveOnJobs: Built bidding-based job portal with AngularJS and Flask backend.
- OneNess: Developed APIs for community Android app for events, messages and connections.
- LocalMistri: Integrated WordPress plugin for booking handyman services with time slots.

Key Projects

- GST Invoice (Desktop App): ERP app for construction invoicing (C#, .NET, MySQL, React, Next.js).
- VNDLY: Vendor management SaaS platform (Django, React, Jinja, Gunicorn).

Education

B.Tech – Computer Science & Engineering

Lovely Professional University, Punjab (2012 – 2016)

Personal Projects & Hobbies

- Crafting, Travel Photography
- Automation scripts for local deployments and server management
- API integrations and microservice experiments in cloud sandbox

Languages

English (Fluent), Hindi (Native)
